

# E-COMMERCE & ORDER PICKING

CUSTOMER CASE: REXEL SVERIGE AB

HelgeNyberg AB

## PICKING ON LOWER LEVEL INCREASES EFFICIENCY

With a demand for increased productivity in their facilities, Rexel Sweden AB in Årsta just outside Stockholm, turned to Helge Nyberg AB. One of the reasons for that, was the previous successful project for one of the group's companies (Storel) in Gothenburg.

Rexel's offer includes new and sustainable electrical solutions and electrical supplies for industry, the housing market and commercial sector. The group is represented in 37 countries and have more than 30,000 employees. In Årsta there are 70 people employed.

### One Instead of Six Warehouses

Six different warehouses should become one in the 17,000 m<sup>2</sup> large facilities, meaning new articles are constantly being handled and added in the system. An ongoing project involves high frequent items for picking should be moved from high shelves to lower shelves. Handling these articles using trucks with elevating platform was too time consuming, and instead they are picked with trucks and attached step trolleys from Helge Nyberg AB. Maximum height for high frequency items are 2 meters.

### More Order Lines Each Shift

Similar picking trucks have been used by another of the group's companies in

Gothenburg for 15 years, and the company is a model for how the work in Stockholm shall become more efficient.

– The personnel likes the trucks from Helge Nyberg. They think they are fast and easy to drive, says Gabriel Chamouni, responsible for Warehouse Service. Moving the articles have already generated an increased efficiency. More and more order lines are being picked every shift. Another 15% of the articles in the warehouse should be handled with the trucks from Helge Nyberg AB before the same levels as those in Gothenburg are obtained.

The number of boxes on a trolley is automatically controlled via Molp computer system. A maximum of 25 orders are picked each round.

[www.helge-nyberg.com](http://www.helge-nyberg.com)

– Helge Nyberg have quickly and smoothly successfully helped us to increase both productivity and efficiency. We are very satisfied. And since we see how well things are working in Gothenburg, we are convinced that it will be great here in Stockholm as well, says Gabriel.

**Easy Trolley Exchange**

The Molp computer system chooses which kind of box should be used for which articles, and also how many boxes that the trolley should be filled up with. The size of the box is determined by the articles' weight and volume. The system merges many orders and automatically creates an optimum driving round for the picking. For one round, a maximum of 25 orders can be picked.

When picking is finished, the trolley is disconnected at the loading area and the order is added to other orders from another system, but for the same customer.

– We work a lot with measuring and reporting from our system. The picking flow is constantly improving, says Gabriel.

– Helge Nyberg have quickly and smoothly successfully helped us to increase both productivity and efficiency. We are very satisfied. And since we see how well things are working in Gothenburg, we are convinced that it will be great here in Stockholm as well, he finishes.

The trucks for Rexel are sold through Helge Nyberg AB's global partner Toyota Material Handling, under the brand name BT-Movit TSE100W-609.

**CONCEPT FOR MANY AREAS**

Over 50 years' collective experience and knowledge of our customers' needs we have specialised in a number of areas. This allows us to offer the optimum solutions, the best service and the most secure collaboration.

**INDUSTRY & MANUFACTURING**

Helge Nyberg operates in both light and heavy industries. We have industrial solutions for the entire material flow.

**E-COMMERCE & ORDER PICKING**

With our long history and our location in a geographic area that is dense with mail order, and logistics and warehousing businesses, we have unique know-how and experience regarding order picking and third party logistics.

**HEALTH CARE & HOSPITAL**

All industries have different requirements and specifications regarding materials and professional equipment. The strictly regulated health care sector has certain specific requirements. We can meet these requirements.

**AUTOMOTIVE & VEHICLE**

The development of smart logistics is perhaps most advanced in the automotive industry. Helge Nyberg's solutions are part of this development.

**SERVICE & SUPPORT**

Our truck and trolley solutions are not only ideal for transporting baggage or materials, for instance at airports and trade fairs. They are just as frequently used as wheeled service points by technicians and installers, for example in factories.

**LEAN SOLUTIONS**

As specialists, we are happy to help you develop the most resource-efficient solution to your material handling needs – the right material, in the right place at the right time.
